

Forecasting and Resilience: Severe Thunderstorms

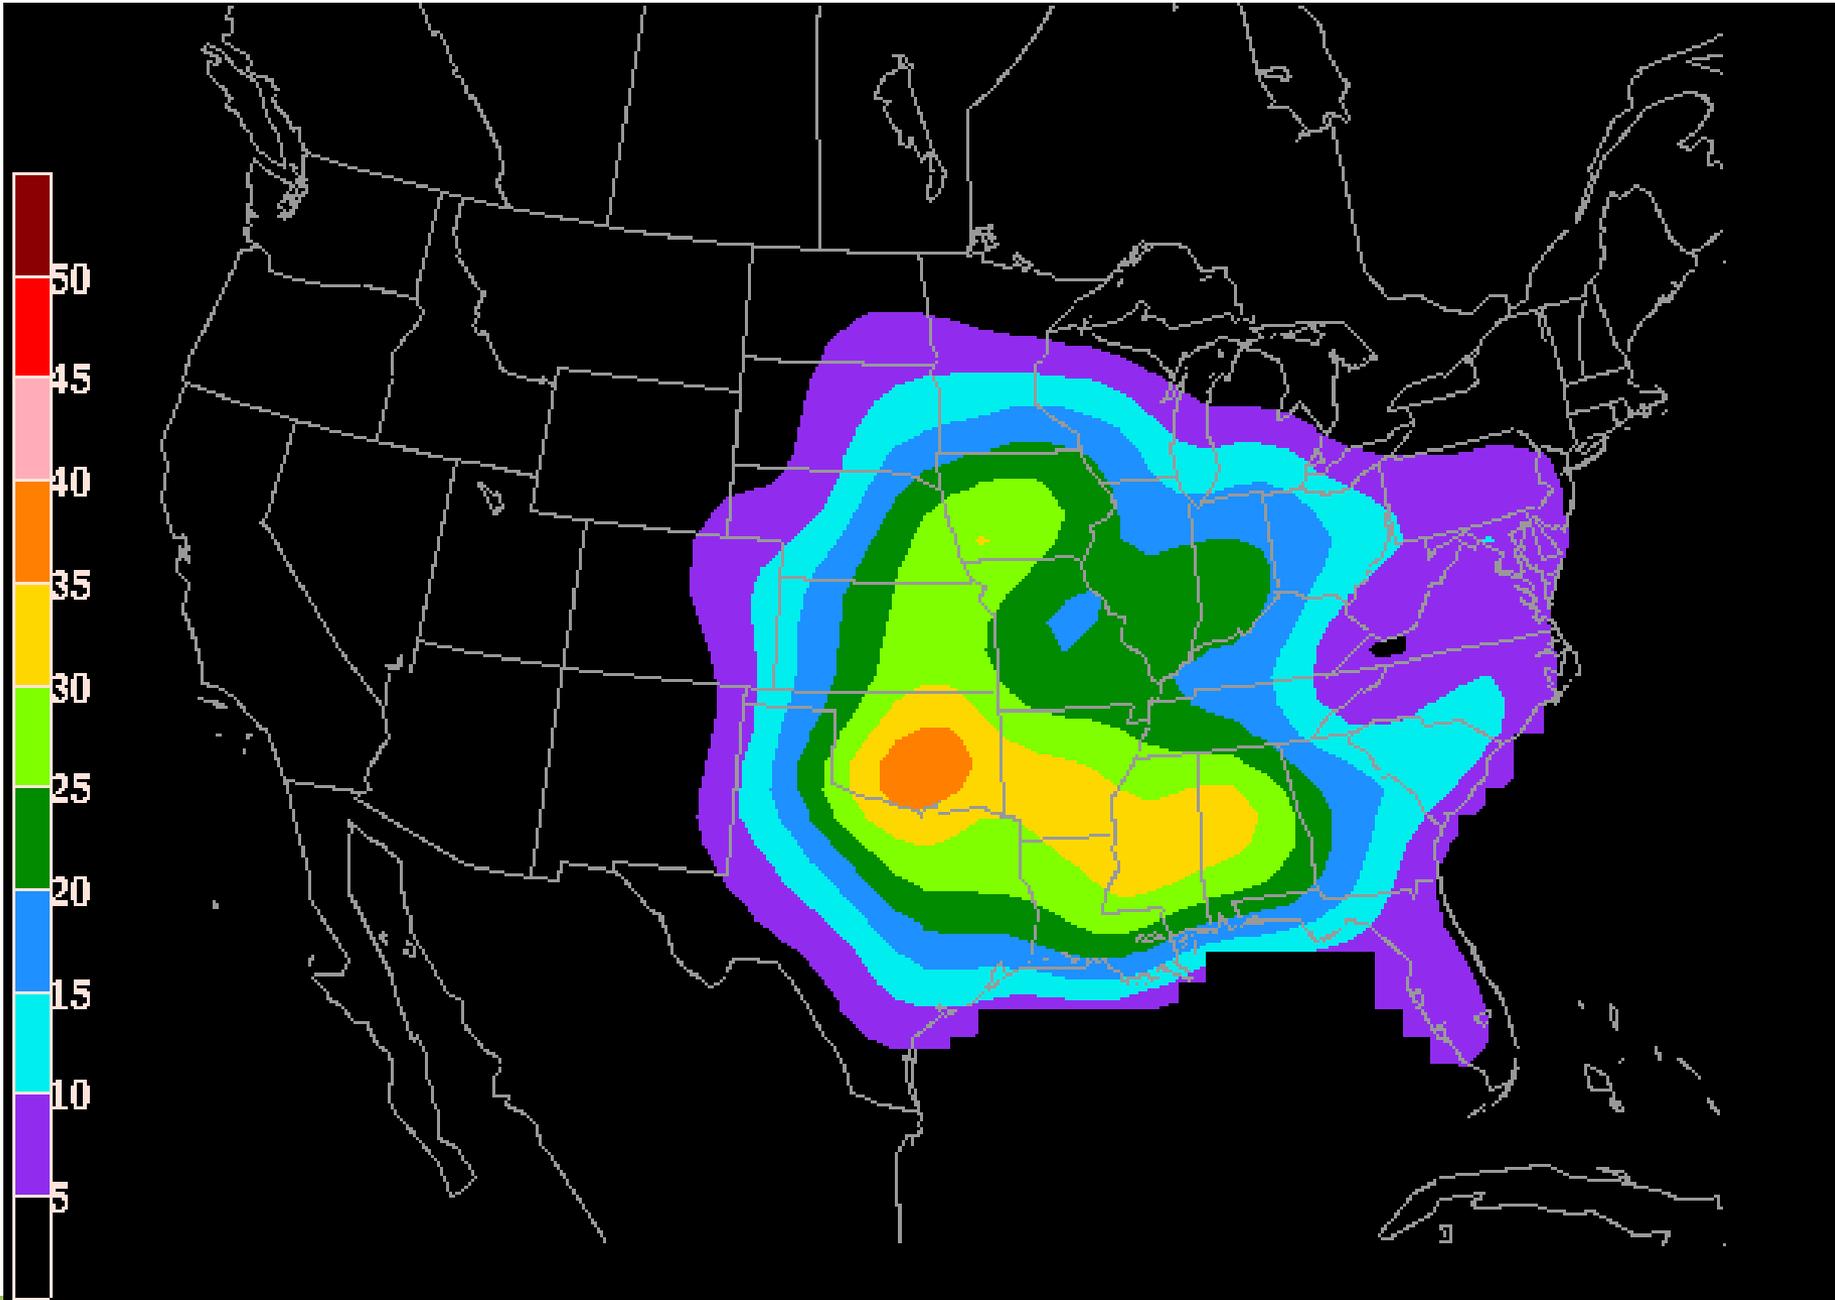

HAROLD E. BROOKS
NOAA/NATIONAL SEVERE STORMS LABORATORY

HAROLD.BROOKS@NOAA.GOV
@HEBROOKS87

Background (Climatology)

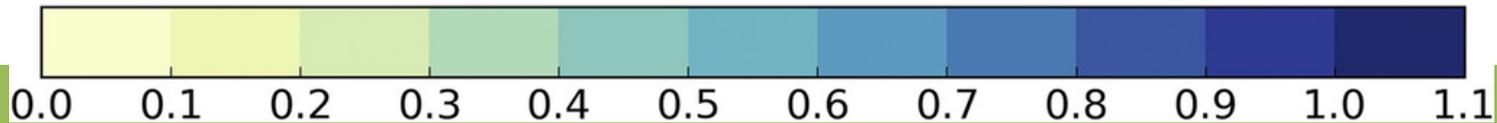

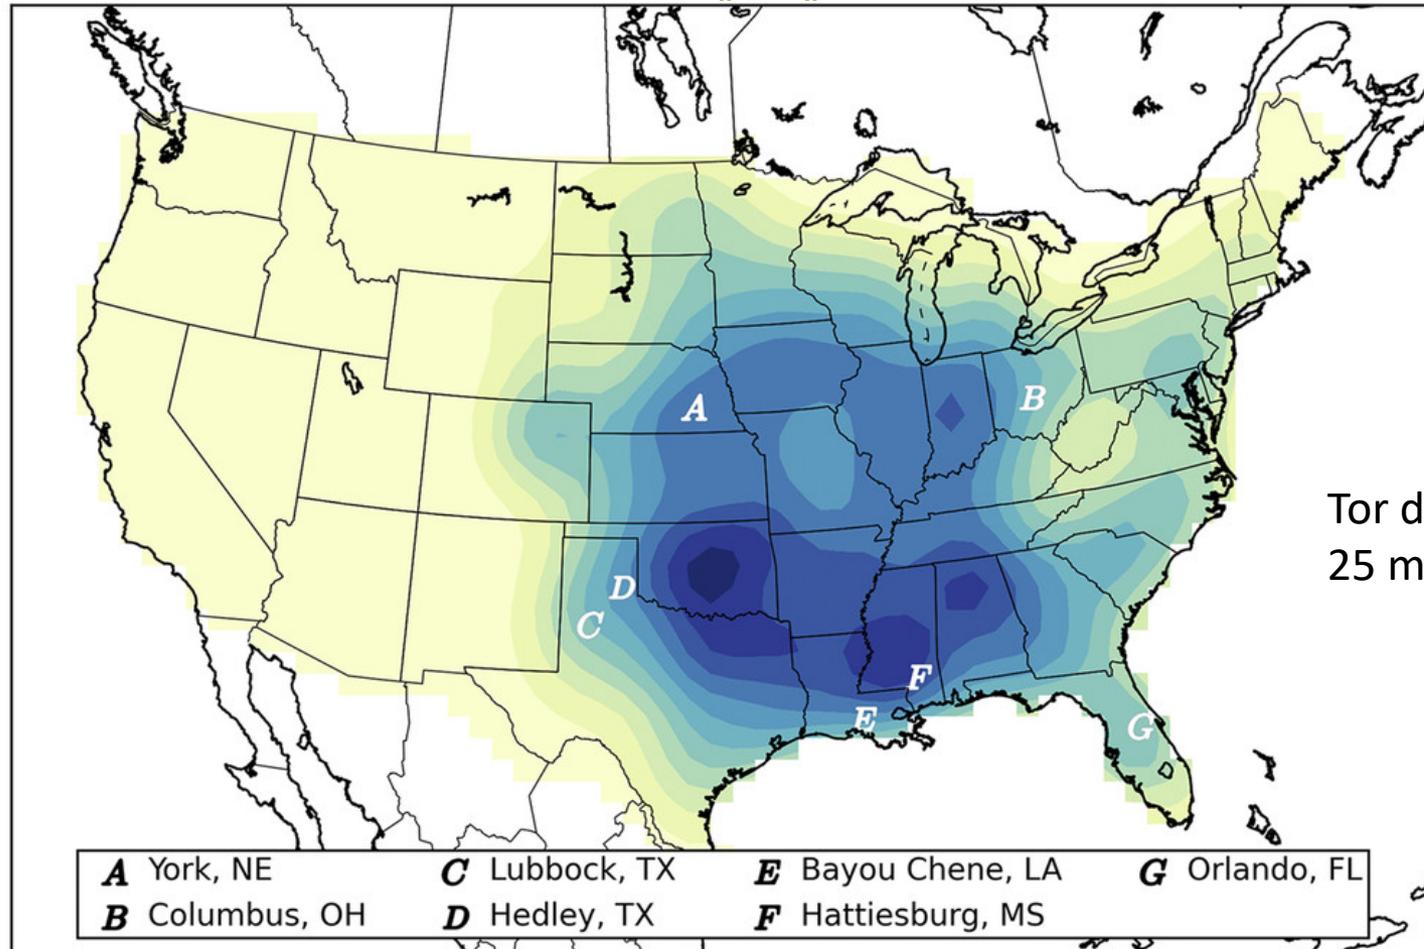

- Severe thunderstorms in US-any tornado, hail \geq 1 inch, winds \geq 58 mph (50 kts) (SPC)
- Severe thunderstorms anywhere, but particularly between the Rockies and Appalachians

Significant (F2 or greater) Tornado Days Per Century (1921-1995)

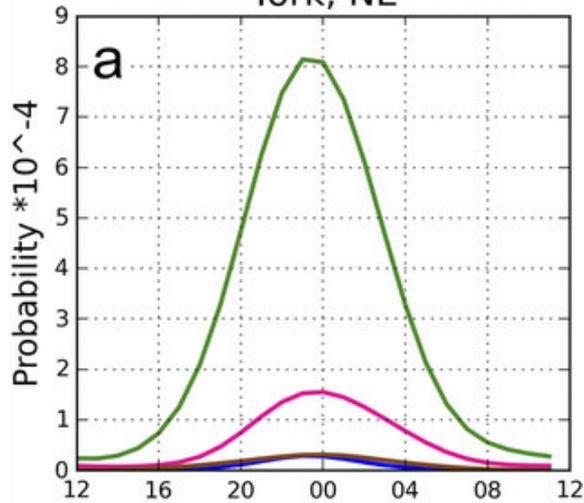

Tornado Occurrence (Krocak and Brooks 2020)

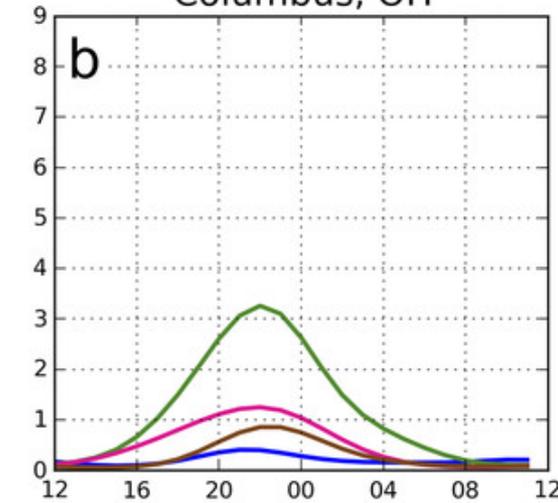

Diurnal Cycle At Different Times of Year

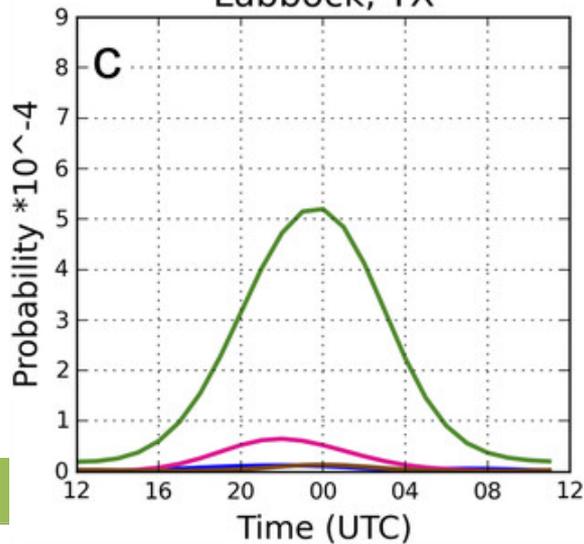

York, NE

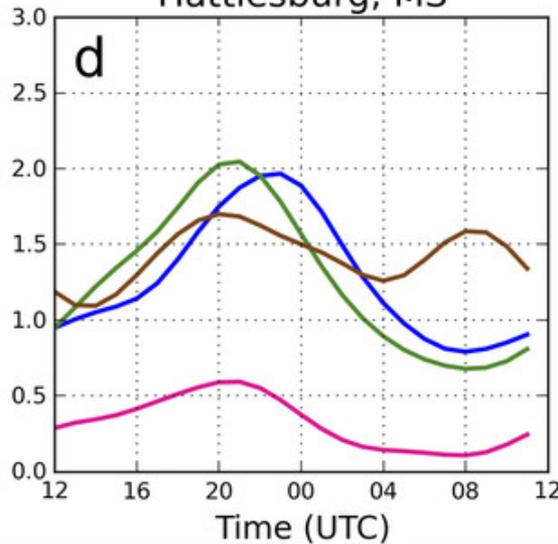

Columbus, OH

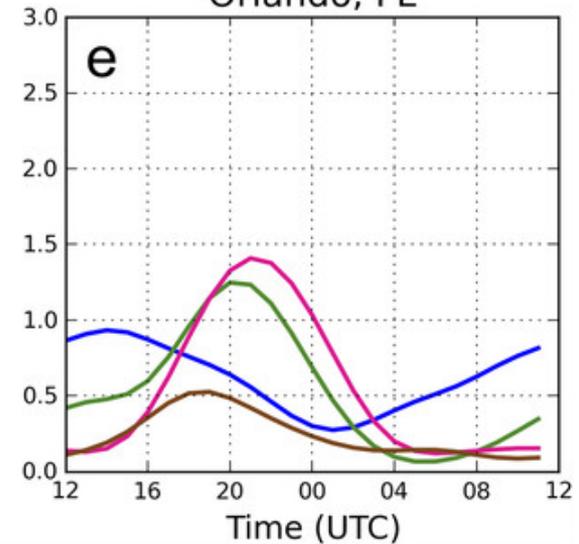

Lubbock, TX

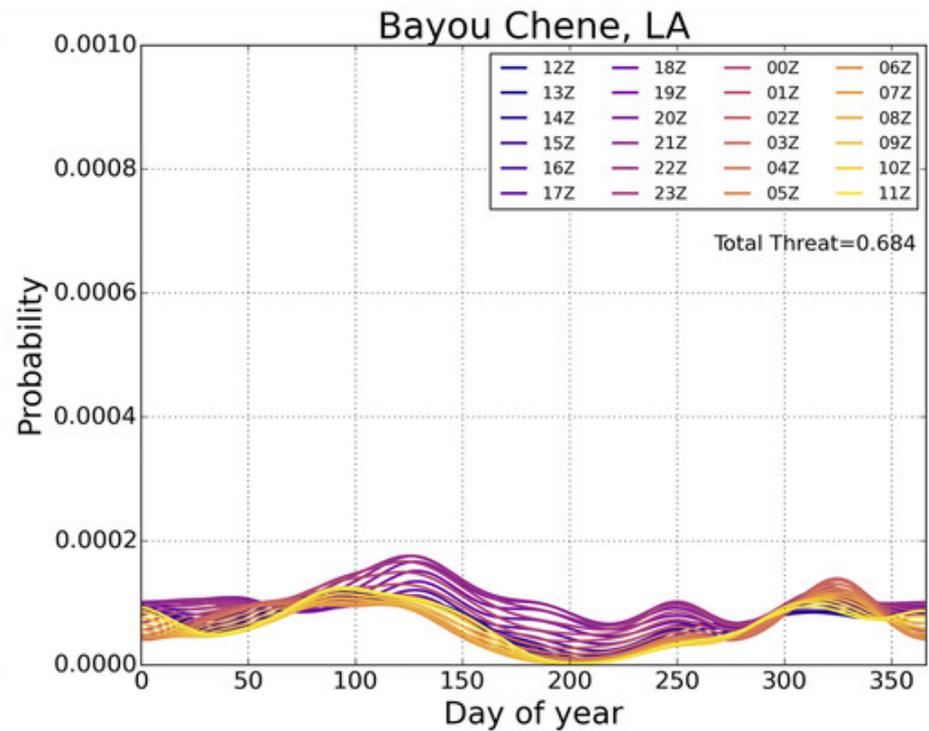

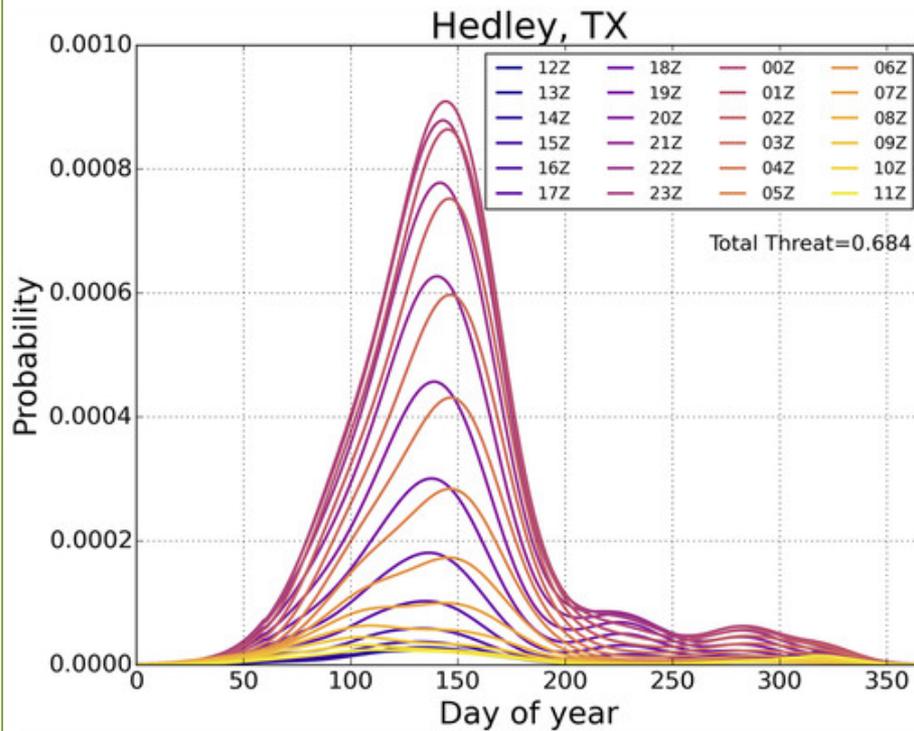

Hattiesburg, MS

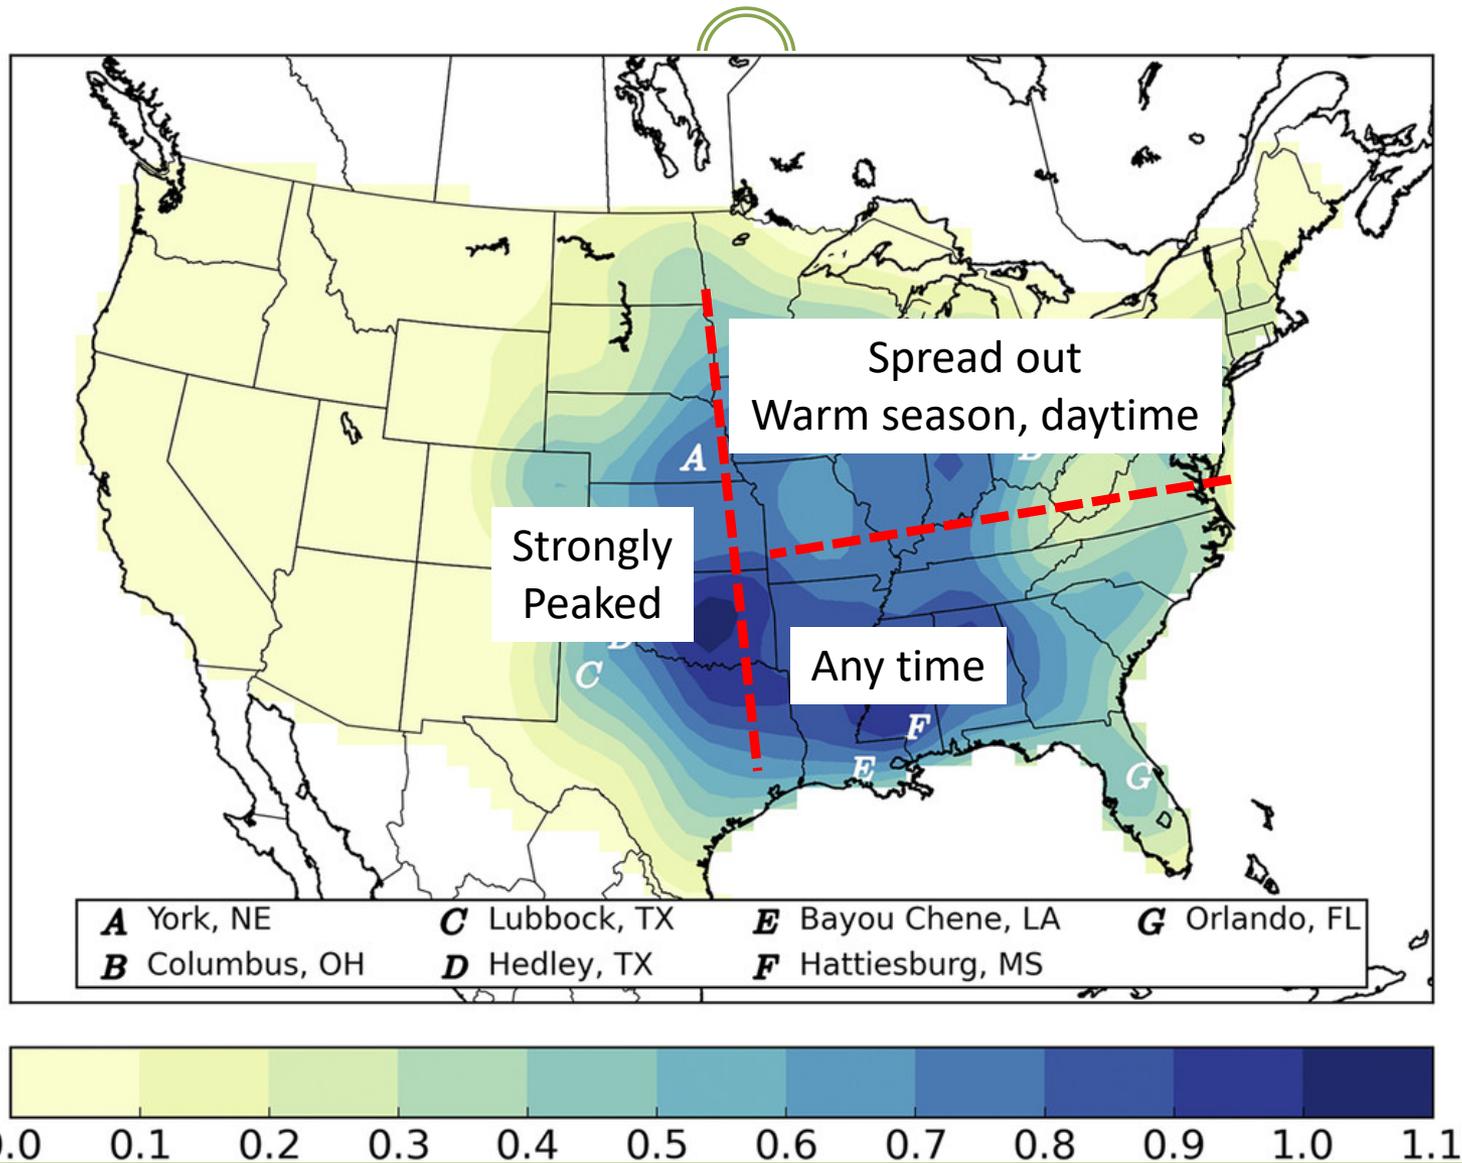

Orlando, FL

Annual Cycle by Every Hour of the Day

Tornado Occurrence (Krocak and Brooks 2020)

Forecasting Across Time and Space

- Currently, forecasts begin “Day 8” (SPC)
 - ≥ 1 day are for coverage within 25 miles of a point on the day
- Watches (SPC)
 - Conditions are favorable for storms within area
 - ~State-size, 6 hours
- Warnings (Local Forecast Office)
 - This storm is severe or will be
 - 300 sq mi., 45 minutes

Day 4

PREDICTABILITY TOO LOW

**Day 4 - 8

SPC Day 1 Outlook and Prelim. Reports Valid:
1200 UTC 04/29/2022 to 1200 UTC 04/30/2022

Research towards future

- 1-3 months
 - Currently hope for ~February-March in some conditions
- 2-4 weeks “Target of Opportunity skill”
- Probabilistic warnings
- “Useful” forecasts
 - Test products with users (EMs, broadcast, public)
 - Revise

Resilience with forecasts

- Primarily life protection from tornadoes
- Some kinds of property protection from non-tornadic

Tornado resilience

- Life protection comes from knowing safety guidance and getting information to use it
- Better building
 - Can we incentivize better construction (hurricane clips, straps to foundation, in-residence shelters)?
 - Adding ~2% to cost of building dramatically improves life protection and reduces property damage
 - The manufactured house problem
 - ✦ Old mobile homes are very dangerous
 - ✦ When new manufactured homes fail, tend to fail from ground up

Hail protection

- Mostly property
- Roofing?
 - Better shingles protect to ~golf balls
- Glass (buildings and auto)

How to be resilient

- Understanding of threat occurrence
 - “Peaked” regions probably are easier to get response
 - SPC has tools and we can make those more usable
- Using forecasts
 - Fixed property is hard to protect, obviously
 - Removing vulnerable things from threat
 - Saving lives-protection and building better
